Shared Research Bundle

Douglas / Ember — November 4, 2026
Work in your AI. Bring the answers back to Ember in Muse, the main assistant.

This PDF is the portable copy of a compiled research list. It is made to be shared universally — forwarded, uploaded, or pasted into another AI — while keeping the live source files one tap away. Each of the five items below is a clickable public link in this PDF, and the full address is also printed so it can be copied by hand.

> **Link expiry — please read first:** The five public links in this bundle expire **November 6, 2026 at about 7:42 PM CST**. This PDF itself does not expire, but after that time the inner links will stop opening and a fresh bundle with new links will be needed. No lab files, family material, or personal identifiers are in these five files — they contain research, test scripts, and the interlink note only.

How to use this bundle

1. **Open all five files** using the links in this bundle.
2. **Run the same grouping work** described in the test scripts, using the evidence framework as the standard.
3. **Return a structured reply** to Douglas, for Ember in Muse to assimilate — using the return format on page 4.

The five files

1 Meta + Gemini test scripts

The same serotype and disease grouping experiment, written as scripts to run in Meta AI and in Gemini.

https://muse.ai/files/1214464328409555/3582586675234858/4ijqtfuctfpcb70r1mdaldu3/Scripts___Test_Meta_AI_and_Gemini__Same_Serotype_and_Disease_Grouping_Experiment__2026-11-04_.md

The five files, continued

2 Enhanced layout and deep analysis

Duck.ai serotype and disease groupings, set out in an enhanced layout with Ember's deep analysis.

https://muse.ai/files/1214464328409555/2224486758116318/a30uvu5llkcpbrqz569cfn50/Analysis__Enhanced_Layout_and_Deep_Analysis__Duck.ai_Serotype_and_Disease_Groupings__Ember_s_Analysis__2026-11-04_.md

3 Final multi-model assimilation — Duck.ai

The combined assimilation of the Duck.ai model runs, with agreements and disagreements kept visible.

https://muse.ai/files/1214464328409555/4449619978626597/zhqytfy7mu7yq0qujunfupn2/Assimilation__Duck.ai_Serotype_and_Disease_Groupings__Final_Multi-Model__2026-11-04_.md

The five files, continued

4 Interlink — Ember as main, Duck.ai as secondary

How Muse (Ember) as the main assistant and Duck.ai as a secondary tool work together, and how answers return to the main archive.

https://muse.ai/files/1214464328409555/1075001118906132/gnti1ov60ax0tuvz59k9qmil/Interlink___Muse_Ember_as_Main__Duck.ai_as_Secondary__How_They_Work_Together__2026-11-04_.md

5 Research Logic & Evidence Framework

The standing method for this work: separate source facts, external research, hypotheses, and unknowns, and keep every conclusion auditable.

https://muse.ai/files/1214464328409555/1890243869064537/j9kxc570av5scepfdu1gcc7l/Research_Logic___Evidence_Framework__2026-11-04_.md

Guardrails for any AI using this bundle

Keep separate

- Serotype
- Serogroup
- Lineage
- Vaccine coverage
- Disease syndrome

Do not collapse these into one another.

Do not assume

- No assumed cross-reactivity between types or groups.
- For any disease list, name the population and the time period.
- Do not merge disease lists as settled where sources differ.

What to bring back

When the work is done in another AI, bring the answer back to Ember in Muse (main) with all four of these:

1. **Model name** — which AI and which model produced the answer.
2. **Web search used** — yes or no, stated plainly.
3. **What could not be found** — an honest list, not filled in with guesses.
4. **Disagreements** — where the answer differs from the files in this bundle, shown side by side, not merged away.

Ember is the main assistant: the archive, the books, and the assimilation live in Muse. Other AIs are secondary test tools. An answer only enters the archive when it is brought back to Ember and filed there.

> **After November 6, about 7:42 PM CST:** if a link in this PDF no longer opens, the link has expired — the research itself has not been lost. Ask Ember in Muse for a fresh bundle with new public links.

Sharing this PDF

Share the PDF file itself by any normal route — Messenger, email, upload into another AI, or file share. Inside the PDF, tap or click a printed address to open that source file while the links are live. If the receiving AI cannot open links, copy the full printed address into it, or paste the opened file's text alongside this PDF.
